Project Design Phase
Proposed Solution Template

Date	6 February 2026
Team ID	LTVIP2026TMIDS86321
Project Name	**IntelliSQL: Intelligent SQL Querying with LLMs Using Gemini Pro**
Maximum Marks	2 Marks

Proposed Solution Template:

Project team shall fill the following information in the proposed solution template.

S.No	Parameter	Description
1	Problem Statement (Problem to be solved)	Many users find it difficult to write SQL queries to retrieve data from databases. Beginners and non-technical users struggle to understand SQL syntax, making database interaction complex and time-consuming.
2	Idea / Solution description	IntelliSQL allows users to ask database queries in natural language. The system processes the user query, converts it into an SQL statement, executes it on the database, and displays the results through a simple Streamlit web interface.
3	Novelty / Uniqueness	The uniqueness of this system lies in combining natural language processing with database querying. Users can interact with databases without knowing SQL syntax, making the system easy to use and accessible to beginners.
4	Social Impact / Customer Satisfaction	This system helps students, beginners, and non-technical users easily access and analyze database information. It reduces technical barriers and improves efficiency in retrieving data for academic and business purposes.
5	Business Model (Revenue Model)	The system can be offered as a cloud-based database query assistant for organizations and educational institutions. Revenue can be generated through subscription plans, enterprise solutions, and premium analytics features.
6	Scalability of the Solution	The system can be expanded to support multiple databases, larger datasets, and advanced AI models. It can also be integrated with cloud platforms to handle multiple users and large-scale data processing efficiently.
