Functional & Performance Testing Template

Model Performance Test

Date	10 February 2026
Team ID	LTVIP2026TMIDS86321
Project Name	**IntelliSQL: Intelligent SQL Querying with LLMs Using Gemini Pro**
Maximum Marks	

Test Scenarios & Results

Test Case ID	Scenario (What to test)	Test Steps (How to test)	Expected Result	Actual Result	Pass/Fail
FT-01	Natural Language Input Validation (user query)	Enter valid and invalid natural language queries in the input box	Valid queries processed, invalid queries show error message	System accepts valid queries and shows error for invalid queries	Pass
FT-02	Database Query Execution	Enter a query like “Show students with highest marks”	SQL query generated and executed correctly	Query generated successfully and results displayed	Pass
FT-03	Result Display	Run multiple queries to retrieve data	Query results should be displayed in table format	Results displayed properly in Streamlit interface	Pass
FT-04	Gemini API Connection Check	Run the application and submit a query	Gemini API should respond and generate SQL query	API connected successfully and generated SQL query	Pass
PT-01	Response Time Test	Measure time taken to convert query to SQL and display results	Response time should be under 3 seconds	Average response time around 2 seconds	Pass
PT-02	Multiple Query Test	Send several queries one after another	System should process queries without delay	Application handled multiple queries smoothly	Pass

PT-03	System Stability Test	Run the application continuously and execute many queries	Application should run without crashing	Application remained stable during testing	Pass
